Education

Queen's University — Kingston, ON

Bachelor of Computing with Professional Internship, Software Design Specialization — *September 2021 – June 2026*

Languages: JavaScript, Python, Java, C# | Frameworks: React, Angular, Django, Firebase

Databases/Tools: Node.js, MongoDB, PostgreSQL, Docker, Git, Selenium, Auth0, Ghidra, Jadx

Coursework: System Level Design, Software Quality Assurance, Software Architecture, Algorithms

Independent Work

The Public DJ Project | *JavaScript, Node.js, Spotify API*

- Built a real-time, shared DJ platform enabling users to collaboratively queue, vote on, and control music playback through a synchronized listening experience
- Developed a song-classification algorithm to organize 700+ tracks into subgenres, enabling more targeted music selection based on listener preferences
- Designed collaborative listening and user feedback features informed by user research to improve music discovery and group engagement

TV Stream Reverse Engineer | *Ghidra, Jadx, Python, Java*

- Reverse engineered an Android TV streaming application to uncover proprietary API endpoints, authentication mechanisms, and encrypted live stream URLs
- Used Jadx/Ghidra to interpret application binaries into readable Java/C files
- Generalized the reverse engineered protocol into a reusable script capable of interfacing with multiple open-source TV platforms

Experience

Software Developer Intern — May 2024 – June 2025

Centre for Advanced Computing — *Kingston, ON*

- **Kingston Health Sciences Centre Dashboard** | *MongoDB, Express.js, React, Node.js, Chart.js*
  - Developed and maintained a clinical analytics dashboard to monitor contamination rates and perform statistical analysis on patient data
  - Optimized data retrieval and rendering pipelines, reducing dashboard load times from 12s to 2s through indexing and efficient query design on 800k+ records
  - Implemented interactive Chart.js visualizations to surface contamination trends, anomalies, and actionable insights in blood sampling data
- **WEMA Inc** | *Flutter, Dart, Django, Python, PostgreSQL*
  - Managed a cervical cancer analysis tool used in Rwanda, Tanzania, and Kenya for communities with little access to modern devices and hospital infrastructure
  - Deployed fixes for a mobile application powered by a Django backend that serviced 3000 unique clients
  - Responsible for creating multiple data analysis forms used for identifying preliminary cervical cancer at risk patients

IT Support Staff — September 2023 – April 2024

Queen's University — *Kingston, ON*

- Troubleshooted enterprise identity, authentication, and account lifecycle issues across Microsoft Azure Active Directory (Entra ID) and Microsoft 365 services
- Utilized Microsoft PowerShell to investigate user accounts, resolve MFA and access issues, and support identity management workflows
- Resolved technical issues spanning onQ, SOLUS, Office 365, OneDrive, and MyQueensU by diagnosing application, account, and service configuration problems

Data Quality Intern — May 2023 – November 2023

Cohere — *Toronto, ON*

- Labelled, ranked, audited, and corrected machine learning data
- Recommended optimization opportunities for over 400 AI generated prompts daily
- Resolved, troubleshooted, and assessed programming issues in Python, JavaScript, and JSON in order to provide training data for the Cohere Language Model

Full Stack Developer Intern — April 2023 – August 2023

City of Kingston — *Kingston, ON*

- **Kingston Locum Doctors Dashboard** | *Angular, Firebase, TypeScript*
  - Created a scheduling service for locum doctors in the City of Kingston area
  - Provided a unique, city-specific solution to allow patients to connect with healthcare professionals directly
  - Utilized Angular-Firebase stack to create secure solution for 20+ different locum doctors

Junior Programs Instructor — May 2022 – August 2022

University of Toronto — *Toronto, ON*

- Creatively introduced middle school students to different STEM concepts using hands-on, iterative learning
- Assessed and resolved technical and personal issues brought by over 100 students in 8 weeks
- Provided resources for students to further knowledge in AI and Programming
